

Pump Station Improvement Program

Improving Infrastructure

The Miami-Dade Water and Sewer Department (WASD) has created the Pump Station Improvement Program (PSIP) to upgrade its Wastewater Collection and Transmission System that includes pump stations, force mains and gravity lines with an investment of \$215 million. Each pump station has to be certified as meeting an established operational requirement. Remedial plans have been designed for 111 pump stations as per the newly negotiated federal Consent Decree. No certificate of occupancy can be issued to a building connecting to an out-of-compliance pump station until the improvement has been completed.

Improving Quality of Life and Creating Jobs

WASD serving nearly 2.3 million residents and thousands of tourists daily, provides continuous delivery of high quality water and wastewater services that protect public health, implement safety and protect the environment. We are investing in the well-being of future generations while creating new jobs and stimulating the local economy.

The PSIP is:

- Providing opportunities that targets small and local contractors as most PSIP projects are under \$5 million.
- Assisting in the outreach to the public as to how each improvement impacts the neighborhoods it serves.

Program at a Glance

Investment: **\$215 million**

Number of Projects:

- **111 Pump Stations**
- **27 Force Mains**
- **78 Gravity Lines Repairs**

Population Served: **2.3 million**
residents and visitors

Key Projects Features:

- Rehabilitation of Pump Stations, Force Mains and Gravity Lines
- All projects have a US Environmental Protection Agency (USEPA) established deadline
